Art Unit: 3682

DETAILED ACTION

1. This is the first action on the merits. Claims 1-8 are pending.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The IDS filed 6/21/00 has been considered in full.

Drawings

4. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Specification

5. The disclosure is objected to because of the following informalities:

The specification refers to claim 1 on page 1. This is improper US form.

On page 3, there should be a separate description for each of figures 4 through 7.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

Art Unit: 3682

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-3, and 7-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Swedish Patent Document 505 856.

Swedish Patent Document shows a vibrating aggregate (please refer to the attached marked-up copy) characterized in that the joint (A) between the connecting shaft (4) and the connecting shaft (B) is an axial bolt (C); there being a recess in the shaft (B) which accepts the shaft (A).

Allowable Subject Matter

8. Claims 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ostergaard et al. ('650) ; Ostergaard ('708); and Niklewski (846) show vibrating aggregate systems.
